

PRAJWAL ALLAYYANAVAR

Karnataka, India | +91-9008341720 | allayyanavarprajwal@gmail.com | [LinkedIn](#) | [Portfolio](#) | Open to Rotational Shifts & Relocation

PROFESSIONAL SUMMARY

I work as a SOC Analyst at Vandyam Solutions, where my day involves triaging alerts, investigating incidents, and hunting threats using Microsoft Sentinel. Over the past year I have built hands-on experience in SIEM tuning, KQL-based monitoring rules, incident response, malware analysis, and vulnerability management. Currently serving as Team Lead overseeing day-to-day SOC operations. Comfortable on rotational shifts; familiar with NIST CSF practices. SC-200 in progress.

SKILLS & CERTIFICATIONS

Tools: Microsoft Sentinel, Elastic Stack (ELK), Defender for Endpoint, Wireshark, Nmap, Nessus, Burp Suite, ServiceNow
SOC Skills: SIEM Tuning, Threat Hunting, Incident Response, Vulnerability Management, Alert Triage, Threat Intelligence
Networking: TCP/IP, DNS, Firewall, VPN, IDS/IPS
Programming: Python, JavaScript
Platform: Windows Server, Active Directory, Linux, Microsoft Azure, GitHub
Frameworks: NIST CSF, OWASP, PCI DSS
Certifications: Introduction to Cybersecurity, Certified Network Security Practitioner (CNSP), SC-200 (in progress)
CTF & Labs: TryHackMe – Top 1% globally, 250+ rooms completed

WORK EXPERIENCE

SOC Analyst <i>Vandyam Solutions Pvt Ltd</i>	Jan 2026 – Present <i>Belagavi, Karnataka</i>
--	--

- Triaged 5–6 security alerts per shift in Microsoft Sentinel; investigated 60+ alerts to date using KQL queries, performed root cause analysis, and managed incident tickets and service requests in ServiceNow per incident response playbooks on rotational shifts.
- Tuned the Microsoft Sentinel SIEM by creating and refining KQL-based monitoring rules to cut alert noise, improve detection accuracy, and proactively spot emerging threats from threat intelligence sources.
- Investigated phishing and email protection alerts; performed malware analysis using Defender for Endpoint and supported vulnerability management by flagging findings and recommending security improvements to customer infrastructure.
- Wrote 15+ incident response playbooks and runbooks following NIST CSF practices; serving as Team Lead responsible for overseeing team operations, managing incident escalations, and recommending enhancements to SOC processes and procedures.

PROJECTS

Enterprise Monitoring Service | *Microsoft Sentinel, Datto RMM*

- Investigated and documented security incidents using Microsoft Sentinel and Defender for Endpoint; traced attack paths and reported on security issues and emerging trends across monitored customer infrastructure.
- Built an alert correlation engine processing 4,000–5,000 events over 7 days across Datto RMM and Sentinel, grouping results into ~500 clusters via host matching and time-based analysis; shared insights with other analysts to improve incident visibility.
- Standardised and analysed multi-source security data by normalising timestamps and hostnames using n8n to generate actionable SOC insights.

Executive Account Takeover Investigation | *Microsoft Sentinel, KQL*

- Investigated a suspected compromise of a CEO's account by pulling Entra ID sign-in and audit logs into KQL, tracing failed logins back to a 3-night password spray and pinpointing the exact login where the attacker got in.
- Found that the attacker had added their own MFA device and created a hidden inbox rule to hide finance-related emails after logging in, and checked the rest of the tenant to confirm a second account had also been compromised.
- Wrote up the investigation as an incident report with a full timeline, evidence for each finding, and the containment steps in order (revoke sessions, reset passwords, remove the attacker's MFA device, delete the inbox rule, block the source IPs).

Active Directory Security Lab | *Windows Server, Kali Linux, Windows 10*

- Configured a controlled AD environment with server, client, and attacker VMs; simulated LLMNR poisoning and NTLMv2 hash cracking attacks to analyse credential compromise techniques.
- Deepened understanding of Windows event log analysis and how common AD attack vectors can be detected and defended against.

EDUCATION

KLS Gogte Institute of Technology <i>Master of Computer Applications (MCA) – GPA: 8.17/10</i>	Belagavi, India <i>Feb 2024 – Aug 2025</i>
