PROFESSIONAL SUMMARY

I work as a SOC Analyst at Vandyam Solutions, where I triage security alerts, investigate incidents, and perform threat hunting using Microsoft Sentinel. I have gained hands-on experience in SIEM tuning, KQL-based detection rules, incident response, malware analysis, vulnerability management, and threat hunting. I have written 15+ playbooks and runbooks used by the team and have taken on Squad Lead responsibilities during high-severity incidents. I am comfortable working in rotational shifts and familiar with NIST Incident Response and ITIL practices. Currently pursuing the Microsoft SC-200

SKILLS & CERTIFICATIONS

Tools: Microsoft Sentinel, Elastic Stack (ELK), Defender for Endpoint, Datto RMM, PRTG, Wireshark, Nmap, Nessus, Burp Suite, Jira, ServiceNow

SOC Skills: SIEM tuning, KQL monitoring rules, threat hunting, incident response (NIST), malware analysis, vulnerability management, playbook/runbook development, alert triage, threat intelligence, root cause analysis, ITIL practices

Networking: TCP/IP, DNS, LAN/WAN, Firewall, VPN, IDS/IPS, authentication, encryption

Programming: Python, JavaScript, SQL

Platform: Windows Server, Active Directory, Linux (Ubuntu), Microsoft Azure (cloud), GitHub

Frameworks: NIST CSF/IR, OWASP, PCI DSS, ITIL

Certifications: Intro to Cybersecurity, CNSP, Linux 100, SC-200 Microsoft Security Operations Analyst (in progress)

WORK EXPERIENCE

SOC Analyst — Vandyam Solutions Pvt Ltd

Jan 2026 – Present

- Triaged 5–6 security alerts per shift in Microsoft Sentinel; investigated 60+ alerts to date using KQL queries, performed root cause analysis, and responded per incident response playbooks on rotational shifts.
- Tuned the Microsoft Sentinel SIEM by creating and refining KQL-based monitoring rules to cut alert noise, improve detection accuracy, and proactively spot emerging threats from threat intelligence sources.
- Investigated phishing and email protection alerts; performed malware analysis using Defender for Endpoint and supported vulnerability management by flagging findings and recommending security improvements to customer infrastructure.
- Wrote 15+ incident response playbooks and runbooks following NIST IR and ITIL practices; led Squad Lead duties during high-severity incidents and recommended enhancements to SOC processes and procedures.

PROJECTS

Enterprise Monitoring Service | *Microsoft Sentinel, Datto RMM*

- Investigated and documented security incidents using Microsoft Sentinel and Defender for Endpoint; traced attack paths and reported on security issues and emerging trends across monitored customer infrastructure.
- Built an alert correlation engine processing 4,000–5,000 events over 7 days across Datto RMM and Sentinel, grouping results into ~500 clusters via host matching and time-based analysis; shared insights with other analysts to improve incident visibility.
- Standardised and analysed multi-source security data by normalising timestamps and hostnames using n8n to generate actionable SOC insights.

SOC Lab Setup using Elastic Stack | *Ubuntu, Elastic*

- Built a SOC lab using Elastic Stack (Elasticsearch, Logstash, Kibana) for centralised log monitoring; ingested and queried logs from multiple sources to detect suspicious activities and security events.
- Designed Kibana dashboards to visualise log patterns and support threat analysis workflows.

Active Directory Security Lab | *Windows Server, Kali Linux, Windows 10*

- Configured a controlled AD environment with server, client, and attacker VMs; simulated LLMNR poisoning and NTLMv2 hash cracking attacks to analyse credential compromise techniques.
- Deepened understanding of Windows event log analysis and how common AD attack vectors can be detected and defended against.

EDUCATION

Master of Computer Applications (MCA) — KLS Gogte Institute of Technology, Belagavi, India

Feb 2024 – Aug 2025 | GPA: 8.17/10
